

PneumoScreen AI

Deep Learning-Based Pneumonia Screening & Reporting System

Patient ID	P-D764EC	Age / Sex	23 / Male
Date	02-05-2026 13:07	Ref. Doctor	Tarun Mondal

CHEST X-RAY (PA VIEW)

Findings:

Patchy areas of increased opacity are noted in the lung fields, suggestive of infective pathology. No pleural effusion is identified. Cardiac silhouette appears within normal limits. Bony thoracic structures are unremarkable.

Impression:

BACTERIAL detected with confidence of 99.12%.

Risk Assessment:

HIGH - Strong radiological evidence of infection. Immediate clinical evaluation required.

Advice:

Clinical correlation is advised. Further evaluation and treatment recommended.

Consultant Radiologist

This is an AI-assisted report. Final diagnosis should be confirmed by a certified radiologist.
